COMING SOON / MY FOCUS RELEASE PREVIEW

A clearer day at work

The next My Focus release brings everyday HR information, decisions and support into more consistent workspaces. Employees can find the next step. Managers can act with better context. HR teams can keep guidance and reporting closer to the work.

Less waiting, more focus

Streamlined and deferred loading helps content appear as it is needed. An optimised Support read path reduces avoidable loading work. Assess the improvements in your environment as part of a guided rollout.

A more consistent experience

Compact light and dark workspaces make it easier to scan information, narrow a list and continue a task. Familiar controls help people move between their everyday HR activities.

Guidance close to the question

Chatbot 2.0 brings approved Knowledge, authorised actions and selected dashboard visuals into the conversation. Employees can follow a source or open the relevant action, within configured access.

Reporting with a clear purpose

Use published sources, joins and fields to build useful reports. Refine results with filters and charts, save useful views, run reports in the background and share branded exports with context.

Support with continuity

Keep request details, attachments, history, internal notes and public responses together. FAQ guidance gives employees somewhere to look before another request, while support colleagues retain the context for a handover.

A connected HR journey

Employee and manager workspaces bring learning, talent and other HR activities into a more connected overview. Available modules and actions depend on your configuration and access.

Plan your upgrade with HRFocus

Agree your priority modules, confirm access and prepare a guided rollout with your HRFocus team. Together, turn the new release into practical value for your organisation.

COMING SOON | Preview of selected improvements. Your HRFocus team will confirm scope and readiness.
